

SmartEvent SmartKiosk

Printing and checking in attendees can take considerable time when using traditional methods. With our latest product, the SmartEvent SmartKiosk, the entire process is streamlined and saves time for both the event organizer and attendees.

As visitors arrive, all they have to do is scan their registration using their printed form or mobile device, and the SmartKiosk will automatically print their personalised identification badge.

The entire process is automated, and built into the SmartKiosk is powerful printing technology including an integrated PC tablet, 1D Barcode Scanner, and a four-colour inkjet printer for high-quality identification badges.

The SmartKiosk is the integrated check-in and badge printing solution your event needs to increase efficiency and attendee satisfaction.

- Customize the outside with your logos to match the event theme
- Easy setup and transport with custom travel case
- Integrated four-colour inkjet printer and precision cutter
- Compatible with the EventsAIR Platform and other platforms including Cvent, etouches, and others.

About SmartEvent

SmartEvent has offices in both Sydney and Hong Kong and has been in operation since 1998. Our team brings extensive experience in both the conference and exhibition industry and with the introduction of mobile online scanning technology 13 years ago, we have been at the forefront ever since.

If you want to see how our tools can help your next event, get in touch with us!

Scalable solutions for your next meeting or event

Save Time | Save Cost | Improve Efficiency
Running a modern event takes innovative technology that you can depend on.

We offer innovative tools for your entire event with our range covering On-Site and Self-Registration, Badge Design and Production, Exhibitor Lead Management, Session Attendance Management, and Entitlement Management.

Without these tools, you'll struggle to find the time to print badges, check-in visitors, track leads, and sell products. Through our innovative solutions, we're streamlining the event process from beginning to end.

Work smarter not harder with SmartEvent.

SwiftLeads

The SwiftLeads Slim Universal Barcode Reader is what you need to increase efficiency in lead generation at your next event! This compact and versatile device is ready for even your largest event, allowing for over 10,000 scans per single charge.

Link and attach documents before, during and after the event to your promoted products to track who is interested and who isn't. After the event, you can upload this data to your favourite lead management software on your computer, smartphone, or tablet with ease.

When paired with the SwiftLeads mobile app, you'll have full access and control of your leads from any mobile device – Wi-Fi not required! With the SwiftLeads Slim Universal Barcode Reader, monitoring and managing your lead data is automatic so you can focus on speaking with leads rather than managing their data.

- No Wi-Fi connection necessary – works over cellular connection or Bluetooth
- Compatible with most lead management platforms and Microsoft Excel
- Powerful SwiftLeads mobile app allows for additional functionality
- Over 10,000 scans per single charge
- Compact size

SmartEvent EventCube

To operate a live event, you rely on your Internet connection to ensure everything goes off without a hitch. This connection is everything, and without it, you could struggle to track registrations, leads, and could ultimately hurt your sales.

You'll never know how reliable your connection will be, but with the EventCube, you'll have an offline safeguard to protect you against slow or disconnected Internet services.

EventCube was developed in close conjunction with the EventsAIR team as a hardware solution for their Continuity Server. With the flip of a switch, you can now run your cloud services from a local server without any interruption or loss of performance.

Never experience a devastating outage again! If the internet drops, EventCube takes over until the internet is back online.

- Works in conjunction with the EventsAIR Continuity Server
- Plug-and-play solution – tell us about your event package and your desired duration, and we'll set everything up for you.
- Even without an Internet connection, continue accepting new badge check-ins, printing badges, and other critical services.
- Automatic synchronization with your cloud platform without interruption.

EventsAIR

Are you seeking the ultimate mobile solution for scanning event attendees as they enter the building? The EventsAIR Mobile Organiser Scanner was created to make the check-in process seamless with minimal disruption with maximum functionality during the event.

The device is built around iOS technology with Mobile 4G and Wi-Fi capabilities so that you can stay connected during even the busiest times. Use the device not only to scan badges as attendees enter the building but also use it throughout the event to search for attendees, control, and post to the Events Stream, publish app alerts, and more.

If you've been searching for the convenient mobile scanning solution that does more than scan badges, this is the tool you need for your next meeting or event!

- Supports Mobile 4G and Wi-Fi
- Scan, track, and manage attendees
- Publish alerts, messages, and photos directly to the Events Stream
- Check for security clearance
- Generate Quick Reports for the event
- Scan 10,000 badges before recharging
- Designed to work with the EventsAIR Organiser App
